

Revolutionizing Workforce Mobility

ARCOS Mobile Workbench is a utility-specific mobile workforce management solution that empowers crews to seamlessly manage planned & unplanned work in one simple, intuitive cloud-based system. It empowers your team with ONE app to improve situational awareness, creating a complete, real time street level view of assets, work status, and crew location (native and non-native) to drive operational efficiency, transparency, and safety in the field during routine jobs, long cycle work, and storm events.

Top Benefits for Electric, Gas & Water Utilities

**Shrink Field
Service Costs**

**Match the Right
Job & Technician**

**Bring the Right
Tools for the Job**

**Accelerate Insurance
& FEMA Payments**

**Boost Customer
Service Metrics**

**Ensure Maximum
Crew Safety**

**Complete More
Jobs in a Day**

**Automate Manual
Processes**

One Mobile Solution for Both Planned and Unplanned Work Events

**Scheduled
Maintenance**
Routine updates
to field assets

New Construction
Build new assets and
successfully place
them in service

Vegetation Management

Mobile Workbench at a Glance

Features Designed for Crews by Crews

Provide a seamless and intuitive user experience on mobile devices in the truck or on the job. Ensure user adoption with features purpose-built for field workers such as creating notes instantly with voice-to-text for hands free, spellchecked dictation.

Built In Time Sheets

Mobile Workbench eliminates manual time tracking steps and duplicated effort for crews and supervisors. Plus, automatically push time sheets into your payroll system with approval workflows and gain more insight into crews by instantly calculating windshield and wrench time KPIs.

Configurable Mobile GIS Interface

Mobile Workbench is tailored to fit your team. Setup icons and colors in your own company standards to map structural, transport, switchable, and non-switchable assets alongside work and supporting documents, photos, and videos.

Connect the Field & Back Office

Mobile Workbench brings all of your disconnected systems together through powerful API integrations, enabling real time communication between the field and back office.
