Revolutionizing Workforce Mobility

Build Better & Accelerate Capital Construction Projects

ARCOS Mobile Workbench is a utility-specific digital construction management solution that accelerates time to revenue by connecting your entire back office and field teams around a common dataset, with tools and views designed to help them safely, reliably, and cost-efficiently complete each phase of capital projects. The full Mobile Workbench feature set supports both planned and unplanned events, meaning you can seamlessly switch from blue sky operations to grey sky response within a single solution.

- **Automate & Accelerate Construction Workflows**
- **Seamlessly Manage Staff & Contractors**
- **Easily Access Compatible Units**
- **Track Crew KPIs**
- **Optimize Long Cycle Work at Every Stage**
- **Start the Next Revenue Generating Capital Project Faster**
- **Prevent Costly Inventory Loss**
- **Validate Work & Eliminate Errors**

The New Standard in Digital Construction Management

Design Modification
Bring engineering designs in from CAD and digitally markup any design changes based on site knowledge

Scheduling/Dispatch
Manage crews and assign primary with 100% of workorders delivered digitally

Job Readiness
Add additional job requirements (e.g., staking, call before dig, locates)

Materials Issuance
Automatically generates available material lists based on project compatible units

Work Steps & Digital Redlining
Allows field workers to record redlines and adders for short or long cycle work

Materials Return
Ensures that parts and equipment are promptly returned to yard and stores

Post-Construction Review
Generate all required reporting to close out a project

Finance Review
Provides time sheets and worker KPIs for payroll and audit

Ready to Manage Work, People & Assets in ONE Mobile Solution?

Construction Management Software at a Glance

Pre-Construction

Mobile Workbench simplifies and accelerates pre-construction with role-based views for foremen and requisition teams to adjust designs, issue job readiness tasks, automate bill of materials, and alert crews to pick up and get an early start.

Short/Long Cycle Projects

Mobile Workbench empowers field workers with an intuitive mobile app that they'll love using, providing instant access to permits, work details, compatible units, and tools to digitally record their design redlines and adders from anywhere.

Post-Construction

Mobile Workbench seamlessly orchestrates project close out by ensuring that parts and equipment are returned to inventory, updating GIS with as-built design, and providing finance with data and KPIs needed for payroll and audits.

A Single End-to-End Digital Construction Workflow

Mobile Workbench brings all of your disconnected systems together through powerful API integrations, enabling real time communication between the field and back office. Replace paper work packets, phone calls, and e-mails with a digital workflow that drives capital projects from design modification through construction and project close out.
