Unlock the Value of Your Data to Make Better Decisions Faster

ARCOS Utility Insight is an operational analytics platform that provides real-time actionable views of your data, to improve efficiency and awareness. With Utility Insight, you can bring disparate silos of knowledge together into a single pane of glass to make the best, most informed decisions, configurable in just about any combination you can imagine.

- **Power Smarter, Faster Operations Decisions**
- **Cut Estimated Time to Recovery for Outages**
- **Stay Poised for Success**
- **Track Crew KPIs**
- **Optimize Long Cycle Work at Every Stage**
- **Star the Next Revenue Generating Capital Project Faster**
- **Prevent Costly Inventory Loss**
- **Validate Work & Eliminate Errors**

Impact Outcomes In Real Time

Outage Management System
Utility Insight provides real-time visibility into major events that require data-driven response

Scheduling/Dispatch
Changes created in your WMS are immediately reflected in Utility Insight, and vice versa

Supervisory Control and Data Acquisition
Spend more time focused on the "control" and less on pulling data to inform stakeholders

Computerized Maintenance Management System
View the latest key metrics around assets alongside crew and work data to prioritize assignments

Advanced Metering Infrastructure
Pull real-time data around consumption to effectively track and manage usage trends

Advanced Distribution Management System
Connect a real-time view of the network to key activities happening in the field to optimize response

Distribution Fault Anticipation
Achieve greater awareness around system health and widely share key metrics across stakeholders

Geographical Information System
Understand the full picture of utility operations active in the field in real time

Ready to revolutionize the way you use and work with your data?

Operational Analytics At A Glance

A Complete Operational View

Utility Insight includes three key displays out of the box, with additional views available as add-on features. These emphasize the key sets of information your organization needs to align around a shared view of your data.

System View

One of the core views in Utility Insight, the Summary view provides visibility into all active planned and unplanned work, with detailed metrics on response time, customer impact, and more.

Commander View

Designed for hands-on operational use, the Commander view allows for a deeper level of detail into current activity in the field, with a configurable map view in a single interface.

Resource View

Realtime performance measurements across the system down to individual resources, including forecasting of resource availability based on schedules and historical performance.
